Engineering student @ uwo | Creating the world that never was |
9785 Mentor
Scarborough, Ontario, Canada

Experience

CSAA Future

Robotics Coordinator

September 2025 - Present (11 months)

Ontario, Canada

Design & Strategy Oversight:

Guided the team through the annual game analysis and robot design process, ensuring alignment with competition strategy.

Mentored students in CAD (e.g., SolidWorks, Onshape) for detailed subsystem design, focusing on robustness and manufacturability.

Fabrication & Assembly Management:

Supervised the safe and effective use of workshop tools (e.g., saws, drills, 3D printers, CNC machines) for robot part fabrication.

Coordinated the final robot assembly and wiring, establishing quality control checkpoints to ensure reliability.

Programming & Electrical Mentorship:

Coached the programming sub-team on robot code architecture (Command-Based programming), sensor integration (e.g., vision processing using Limelight or PhotonVision).

Trained students on proper electrical system design, power distribution, and troubleshooting of motor controllers and sensors.

Team Leadership & Project Management:

Implemented a structured build season schedule with defined milestones and deadlines (e.g., prototyping, iteration 1, competition bot ready).

Fostered a culture of safety, collaboration, and Gracious Professionalism among all team members.

D-Lite's

Team 9659

Founding Team Captain

October 2023 - June 2025 (1 year 9 months)

Toronto, Ontario, Canada

Led weekly leadership team meetings and daily build season meetings, managing task allocation and tracking progress across Mechanical, Electrical, Programming, and Design sub-teams.

Led the brainstorming and concept selection phase, creating initial prototypes, and developing the final robot design using Onshape CAD software. Also enforced design standards, including tolerance stacking analysis and Design for Manufacturing (DFM) principles.

Designed and implemented multiple autonomous routines, coordinating sensor input from the gyroscope, encoders, and computer vision systems to execute complex, multi-step field movements.

Cyberworks Robotics Inc.

Student Intern

July 2024 - August 2024 (2 months)

Designed sensor and camera mounts for an autonomous airport wheelchair using CAD software.

Education

Western University

Bachelor of Engineering - BE, Engineering · (August 2025 - June 2029)

Georges Vanier Secondary School

· (2021 - 2025)
